

Dear Customer,

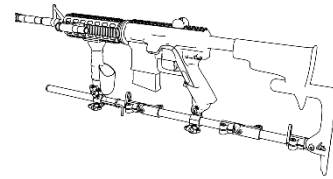

Thank you for purchasing the best Virtual Reality stock rifle solution.
If you bought a Kit, you could find the mounting tutorial on our discord:
<https://discordapp.com/invite/bvpHh2W>
Contact us on Discord, Facebook, or Reddit for any questions.
To set up your ProTubeVR, please, follow this tutorial:

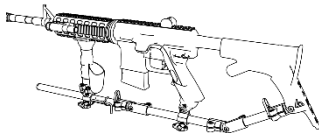

1- Put it in line

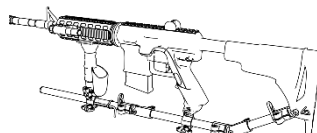

2- in-game, take your favorite weapon and put it in the Cup (don't use 2nd hand at this point)

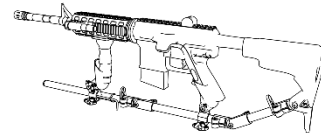

3- Make the weapon almost in line with the ProTubeVR using Primary hand stepping angle

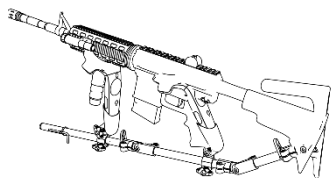

4- Rise the back-end using little tube stepping angle

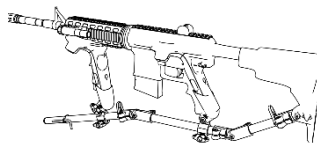

5- Adapt check-rest angle using Back-end stepping angle

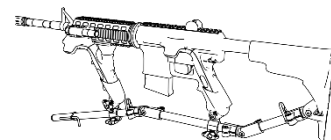

6- Set back-end length and align (don't use front hand at this point)

7- Grab the rifle using 2nd controller and put it in front cup

8- Use the middle stepping angle tube connector to change front hand high and make the rifle almost align (how it was without the 2nd hand)

9- Play on front non-stepping Cup angle to fine tune Barrel angle using this little trick, will allow you to really fast adapt from one weapon to another

So, if you get lost on set-up, just go back on 1st step. It's working for 99% weapons

Enjoy feeling the Game!

The ProTubeVR Team
